

Kickstart Vendor Hub

Mobile operations manual for admin staff and field vendors — illustrated procedures, security guidance, and Karachi deployment reference.

Classification: Internal use. Contains operational credentials and deployment-specific examples. Not for public distribution. Redact screenshots before external sharing.

DOCUMENT VERSION 3.1 — Professional edition	EXAMPLE GEOGRAPHY Karachi (seed-aligned)

1 Summary & classification

This manual describes how to use the **Kickstart Vendor Hub** mobile application for day-to-day maintenance and operations across cities, branches (sites), and vendor accounts.

Internal use only. Default passwords and PINs in this document match a sample/staging seed for illustration. Production environments must follow your organisation’s credential policy. Replace or redact values before distributing outside authorised teams.

The PDF pairs concise guidance with device screenshots captured on a representative handset. Currency examples use **PKR**.

2 Purpose, scope & audience

Purpose

Enable consistent onboarding for operations managers, coordinators, and vendor technicians: first-run setup, secure admin access, task creation and oversight, vendor execution (costs, photos, completion), and PIN governance.

Scope

In scope: mobile app flows for **Admin & operations** and **Vendor portal**, city-scoped data, dashboards, task lifecycle, and PIN/device-lock administration. Out of scope: backend API administration, database migrations, and third-party identity providers unless your organisation layers them on.

Audience

Role	Typical use of this manual
Operations / admin	Unlock admin portal, switch city, create tasks, review costs, rotate vendor PINs, manage device password.
Field vendor	Sign in with city PIN, filter by branch, update task costs, attach evidence, hold or complete work.
IT / support	Credential expectations, troubleshooting table, escalation paths.

3 Roles & portals

Portal	Primary users	Capabilities (summary)
Admin & operations	Office staff	City dashboards, task creation and management, branch-level reporting, vendor PIN management per city, per-device admin unlock password.
Field vendor	On-site technicians	City PIN entry, My Tasks only — execute assigned work, enter costs, upload photos, Hold or Mark completed .

First-run choice is stored on the device. A device configured as **Field vendor** does not expose admin navigation.

4 Credential reference — Karachi (seed / staging)

Use your organisation’s authoritative records in production. The table below aligns with a typical seeded deployment for training.

Item	Description	Example value
Admin portal device password	Unlocks admin area on <i>this</i> device. Distinct from vendor city PINs. Change via Admin → Choose city → Admin portal device password .	Ksportaladmin1100
Karachi vendor portal PIN	Vendor sign-in for Karachi. Rotating PIN under Vendor PINs invalidates prior sessions until vendors enter the new PIN.	1122
Karachi vendor account	Vendor code receiving tasks created for Karachi in this deployment.	KS_IT_KHI_VENDOR
Karachi branches	Sites available for assignment and filters.	VitalFoakh, BRR, Endeavour, Creekside, Mega

5 End-to-end workflow overview

Admin sequence (high level)

- 1 Select **Admin & operations** at welcome; unlock with device password when prompted.
- 2 Open **Admin portal**; choose **Karachi** (or your operating city) via navigation.
- 3 Use **Dashboard** for counts and branch cost roll-ups; apply date filters as needed.
- 4 Create tasks under **Create Task**; confirm vendor visibility for that city.
- 5 Monitor and manage tasks under **Task Management** (search, filters, view/download/delete per policy).
- 6 Maintain **Vendor PINs** and device lock settings according to security policy.

Vendor sequence (high level)

- 1 Open **Vendor portal**; enter the **city PIN** issued for that location.
- 2 On **My Tasks**, filter by branch if required; open a task card.
- 3 On **Task Detail**, enter labour/installation (and other) costs, attach photos if required.
- 4 Choose **Hold** when work pauses (visible to admin as on hold) or **Mark completed** when finished.
- 5 Return to the list to verify status and totals.

Tip: Devices provisioned as admin can switch to **Vendor portal** from the portal picker to validate end-to-end behaviour without a second handset.

6 Illustrated procedures (device screenshots)

Figures follow the recommended teaching order: welcome and admin access, security screens, dashboards and tasks, vendor sign-in and execution.

Figure 1 — Welcome / usage choice

Select **Admin & operations** for back-office features or **Field vendor** for PIN-only vendor access.

Figure 1 — Welcome / usage choice

Figures 2–3 — Admin unlock & portal selection

Enter the admin portal device password, then choose **Admin portal** or **Vendor portal**.

Figure 2 — Admin portal unlock

Figure 3 — Select portal

Figures 4–5 — Vendor PINs & admin device password

Vendor PINs: per-city PIN and generation counter. **Admin portal device password:** rotates the lock shown at admin unlock (not the vendor PIN).

Figure 4 — Vendor portal PINs

Figure 5 — Admin portal device password

Figures 6–8 — Dashboard (Karachi)

Operations Overview summarises task counts; branch overview shows PKR totals; open the filter for date-range selection.

Figure 6 — Operations Overview

Figure 7 — Total cost & branch overview

Figure 8 — Select Date Range

Figures 9–11 — Task Management & Create Task

Search and multi-filter task lists; create tasks with branch, category, vendor, and description; confirm success for the vendor queue.

Figure 9 — Task Management

Figure 10 — Create Task

Figure 11 — Task created (example: Intercom @ BRR)

Figures 12–13 — Vendor sign-in & My Tasks

Figure 12 — Vendor sign-in

Figure 13 — My Tasks

Figures 14–16 — Task detail & updated list

Hold vs **Mark completed**; list reflects completed status and totals.

Figure 14 — Task on hold

Figure 15 — Task completed

Figure 16 — My Tasks (after completion)

7 Task statuses & actions

Status / action	Meaning	Who sees it
Pending	Assigned; vendor work not finished.	Vendor & admin lists.
On Hold	Paused (e.g. awaiting parts). Vendor initiated via Hold .	Vendor confirmation; admin dashboards/lists.
Completed	Closed with saved costs per policy.	Vendor & admin; affects dashboards and branch totals.
Delete (admin)	Removes task when policy allows; often confirmatory.	Admin Task Management.

8 Security, PIN rotation & device hygiene

- **Separate secrets:** Admin device password ≠ vendor city PIN. Train staff not to reuse corporate SSO passwords for device locks.
- **PIN rotation:** Changing a vendor PIN under **Vendor PINs** bumps generation and signs vendors out until they enter the new PIN — plan communication before rotating.

- **Lost devices:** Treat like credential compromise; rotate PINs, clear app data or remote-wipe per MDM policy.
- **Screenshots for audits:** Mask PINs and passwords in external-facing evidence packs.

9 Troubleshooting

Symptom	Recommended checks
Empty lists / no branches	Correct city selected; pull to refresh; verify network/VPN and API availability.
Admin unlock rejected	Confirm current device password vs default; caps lock; retry after typo.
Vendor PIN rejected	City matches PIN; ask ops for latest PIN if recently rotated.
Signed out unexpectedly	PIN generation may have changed — obtain new PIN from admin.
Camera / gallery blocked	OS permissions for camera and photos; retry after granting.

10 Glossary

Term	Definition
Branch	Site or location within a city (e.g. VitalFoakh, BRR).
City PIN	Vendor portal credential scoped to a city; managed under Vendor PINs.
Generation (PIN)	Version counter; increments when PIN changes to invalidate old sessions.
Admin portal device password	Local lock for admin features on a specific device.
My Tasks	Vendor queue of assigned work for the signed-in city/vendor.

11 Support & escalation

For production incidents (authentication outages, data not syncing, suspected unauthorised access), follow your internal IT service process. Capture: device model/OS, app version, city, approximate time, anonymised task IDs where safe, and whether PIN rotation occurred.

Channel	Notes
Internal IT / helpdesk	Primary route for credential resets and access policy.
Operations lead	Branch/city scope and vendor coordination.
Application owner	Defects requiring code or configuration change.

12 Document control & approvals

Version	Date	Summary of changes
3.1	May 2026	Professional PDF layout: cover, TOC, expanded guidance, glossary, footer pagination.
3.0	May 2026	Karachi screenshot walkthrough; <code>screenshots/manual/</code> naming.

2.0	—	Prior Lahore narrative.
